

**2. Please draw a UML diagram to illustrate the pattern.**

**3. Describe the coding conventions you were using for your software.**

Troughout the project I used for Naming methods and variables the Camel Case and for Classes the Pascal Case style, which is standard in Java. I tried to implement the DRY rule and to avoid repeating Code in my project – also the standard of not more than 120chars in one line was applied and variables have clear names. For the Indentation I've used the Kernighan & Ritchie principle.

#### 4. Commit your software to the existing github.com project.
